WASHING MACHINES

AEG Laundry appliances give perfekt results, due to sensor technology in Lavalogic washing machines which ensure optimum results - Perfekt Fresh Laundry

WASHING MACHINE FUNCTIONS

ADVANCED FUNCTIONS

Cycle Times
Due to AEG-Electrolux's technological development of motors and electronics we are able to offer machines that wash a full 7kg of cottons at 60°C in 99 minutes. One of the quickest energy label programs in the world.

Weight Sensor
It's fantastic knowing that you have a machine that will give you perfect results. Our Lavalogic series machine has a weight sensor that weighs the clothes, telling you if you can add to the wash load whilst ensuring perfect results every time.

LCD
Provides information, feedback and accurate end time about the programs, weight and options selected, to ensure you are in full control.

Time Display
Shows an accurate time of when the program will end or the time remaining, dependent on model.

Time Saver
Options of normal, short and very short are offered to give full control over the length of the program. You can wash a 6kg load at 60° in only 59 minutes, still getting an A grade wash.

Delay Start
Ensure the laundry is ready when required, reducing creasing and preventing musty odours when damp clothing is left in the drum.

Advanced Fuzzy Logic
Even more effective than Fuzzy Logic, Advanced Fuzzy Logic calculates the precise amount of water required for the main wash and rinse, resulting in the best wash and rinse performance with the lowest water, detergent and energy consumption.

Detergent Dosage Indicator
This indicator is linked to the weight sensor and recommends the percentage of detergent that is required in relation to the manufacturer's recommended dosage. Provides perfect results whist saving you money.

Memory Program
The ability to store favourite or most used program(s).

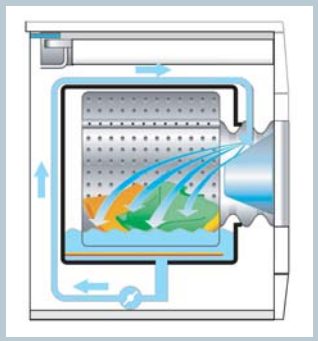
FEATURES

Load Capacities
With load capacities of up to 7kg, the average weekly wash can be completed with ease.

Rinse Hold Facility
Helps to reduce the creasing & musty odours from leaving damp clothes in the drum after the cycle has finished. The clothes remain in water from the final rinse, until it is convenient to select the spin program.

Rinse Plus
Produces the perfect rinsing results by inserting an extra rinse into the wash cycle. This option can be selected for those with sensitive skin, however if too much detergent is detected on the final rinse, Rinse Plus is automatically activated.

Advanced Rinse Technology
Water enters the tub from the bottom to rinse the clothes, whilst also being pumped in from the top of the drum driving water into the middle of the wash load resulting in a more efficient rinse.



Bio Wash Phase
Holds the wash at 40°C for almost 10 minutes before continuing with the cycle resulting in better stain removal by increasing the effectiveness of enzymes in Biological detergents.

Pre-wash
20 minute warm or cold wash option to loosen dirt and stubborn stains prior to the main wash.

Stain
Allows you to use stain-removing agents with biological powder, by adding extra time after the Bio Wash Phase to allow introduction of stain remover prior to continuing with the wash.

LED
Displays the time remaining along with any start delay countdown if selected.

LED Wash Stage Indicator
Each LED lights up to indicate which part of the wash phase the machine is currently in.

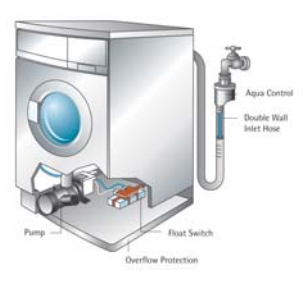
Fuzzy Logic
Adjusts the wash cycle depending on the load and program. It calculates the amount of water required for the main wash, providing the best washing and rinse performance with the lowest water, detergent and energy consumption.

Flow Sensor
Measures the amount of water that has flowed into the machine, to control water usage and help protect against flooding.

Turbidity Sensor
This measures the clarity of the rinse water. If turbidity is detected (e.g. excess detergent, fluff) then an extra rinse is automatically added, to give perfect rinse results.

WASHING MACHINE FUNCTIONS

Aqua Control
An internal system, which monitors the water level to detect leakage. Once detected, water will be prevented from entering the machine and the display will indicate this problem.



Interior Drum Illumination
The drum automatically lights up when door is open for greater visibility when loading and unloading.

Child Safety Lock
Once engaged this ensures that the door cannot be closed shut by little fingers, especially a concern for families with children and pets.

Foam Suppression System
If excess foam is detected water is added to the wash ensuring that foaming is reduced, for improved rinsing.

Energy Rating
All AEG-Electrolux washing machines are AAAA rated for water and have a 4 or 3.5 star energy rating depending on the model.

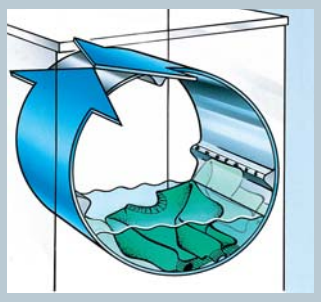
Spin Up-to 1600rpm
The higher the spin speed, the more water will be expelled from the clothes giving a shorter drying time.

Variomatic Spins
This alternates progressively faster spinning with frequent tumbling stages, to minimise creasing.

Programs
All AEG-Electrolux washing machines have a range of programs to ensure that every load is washed to perfection.

Refresh Program
At ONLY 20 minutes, this wash program is AEG-Electrolux's quickest, ideal for 'worn once' clothes.

Wool Program
Takes extra care of woollens by gently moving them through the wash solution from side to side avoiding any tumbling action that is unsuitable for wool.



Silk Program
Designed specifically for silk. A very gentle 30°C wash that uses a specially designed spin cycle only once at the end of the program to help reduce creasing.

Delicate Program
A gentle program designed for mixed fabrics found in delicate clothes.

Handwash Program
Allows 'handwash' labelled items to be washed by machine, an extremely gentle program.

Sensitive Option
Ideal for people with sensitive skin - by adding more water to all the rinses, this option removes even more detergent. This is endorsed by the German Eczema Society.

Easy Iron Program
Reduces ironing time by up to 50% through actively reducing creases in fabric caused throughout the wash and spin cycle. This program tumbles intermittently at the end of the cycle.

Energy Saving Program
An intensive wash action at high temperature, saving energy and money.

Fashion Program
Developed for the 'fashion' fabrics of today, these fabrics stay looking better for longer using this gentle yet thorough wash action.

40°- 60° Mix Load
Fabrics, labelled at 40°C and 60°C, can be washed together at the same time. Offers gentle cleaning with a perfect result by washing hot enough to ensure that clothes labelled 60°C are cleaned, yet cool enough to ensure that clothes labelled 40°C are not damaged.

Lingerie Program
Specially designed to care for and protect very delicate fabrics so ensuring optimum wash results with maximum care.

Cotton Program
For outstanding wash results, the AEG-Electrolux cotton program also minimises energy and water.

NB: Features may vary depending on model. Please refer to product specifications.

LL1620 – 7kg Washing Machine

$3,499

Functions and Features

- 1600 rpm spin washing machine
- 7kg maximum wash load
- 30cm extra wide porthole with 165° opening

DRYERS

AEG condenser dryers give you Perfekt Fresh Laundry every time. With sensor drying programs, you simply set the degree of dryness you want and the machine will do the rest.

DRYER FEATURES

FEATURES

3 Digit Display
Displays the program stage and its time remaining.

Sensor Dryer
The customer can select the level of dryness required from ironing to extra dry and the dryer will sense when the clothes are dried to the level specified.

Sensitive Option
Ideal for those with sensitive skin, this gentle program cares for clothes.

Leisure Program
Dries thicker fabrics and can even dry the seams on clothes such as jeans and fleeces.

Intensity Setting
Three step variable intensity that gives greater control and increased drying performance.

Large Porthole
The large 30cm portholes along with 165° door opening makes AEG-Electrolux tumble dryers easy to load and unload.

Reverse Tumble Action
Loosens clothes as they dry to prevent tangling and creasing.

Cool Down
Cool air is introduced at the end of the cycle to minimise creasing for easier ironing.

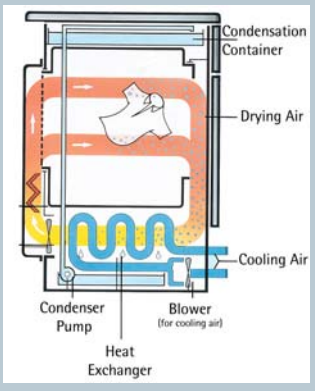
Clean Filter Indicator
Indicates when the fluff filter needs cleaning in order to ensure an efficient drying program.

Water Tank Full Indicator
Indicates when the water tank is full. The dryer will not continue unless it has space to condense the water vapour into the tank.

Energy Rating
All AEG tumble dryers have a 2.5 star rating and run at 259kWh per year.

Load
Load sizes of up to 6kg to dry the same load that has just been washed.

Condenser Dryer
This condenses the moisture back into water and fills a large self sealed water container that can be poured down the sink. This dryer can be situated anywhere in the home.



Easy Iron
Using reverse tumble and a low heat, clothes are dried with minimal creasing.

Wool & Silk Care
Cool air and gentle tumbling ensure that wool can be dried with care.

Refresh Program
To liven up clothes which have been in a cupboard for some time.

Extra Dry
Ideal for ready-to-wear garments or ready-to-use bedding.

Intensive Dry
High heat setting to achieve quick yet intensive dry.

Storage Dry
Ensures that the garments are suitably dried to store away.

Hand Iron (Damp)
Ideal for items that need to be ironed. There is enough moisture to make ironing easier and more effective.

Machine Iron (Damp)
Ideal for items that need to be machine ironed, i.e. with a rotary iron, such as sheets. To ensure just enough moisture that when ironed once, the sheet is dry.

Manual Time
For full control, sensors can be overridden by a manual timer.

Easy Access Lint Filter
Prevents any fluff or small items from entering the pump, catching it all to ensure the pump is clear for effective drying. Accessible from the front of the machine, the fluff filter is easy to clean.

Optional Stacking Kits
TRZ902 - Convenient stacking kit to join the two appliances together to form one unit for safe and secure operation.
TRZ903 - This stacking kit has a convenient slide-out shelf to support a laundry basket when unloading the dryer. The stacking kit joins the two appliances together for safety and security.

Optional Drain Kits
A drain kit allows for continuous draining of the condensed water, eliminating the need to empty the water container.

NB: Features may vary depending on model. Please refer to product specifications.

CUSTOMER CARE / EXTENDED WARRANTY

Customer Care

Our National Customer Care Centre records details of all AEG products that you have in your home. Should you require instructions or service we can quickly identify the exact model and commence any necessary support. A local call charge 1300 line allows you from across Australia to directly dial for assistance. Our 350 strong service network covers most areas of Australia. We operate a combination of our own personnel and independent service contractors to guarantee satisfaction. Tel: 1300 650 020.

3 Year Warranty

All AEG appliances have a full 3 year warranty covering parts and labour. If any part of the machine fails or a fault develops through normal use, it will be repaired free of charge (in accordance with terms and conditions on our warranty card).

Spare Parts Direct

To order spare parts or accessories direct, please call or fax our Spare Parts Office with the model or 9 digit PNC number; the parts or accessories can be quickly despatched direct to your home.
Tel: (03) 9569 7744
Fax: (03) 9569 1650

3+3 Extended Warranty Plan For Total Peace Of Mind

All AEG Appliances are covered by a full 36 months (3 years) parts and labour warranty. The 3+3 Extended Warranty Plan extends the full parts and labour warranty to 72 months (6 years). The cost of this plan is 3% of the cost of each individual product selected to be covered under the plan. The 3% must be noted on the AEG Proforma.

You can be assured that only 100% qualified AEG service technicians will look after any service requirement.

Every effort has been made to ensure all specifications in our brochure are correct at time of printing. Actual appliance measurements, specifications and ratings may vary slightly due to technical improvements and slight manufacturing differences. Where sizing is crucial, we recommend actual appliance and installation instructions accompanying each appliance be checked. Andi-Co Australia Pty Ltd ABN 68 005 899 365 will not be liable for any loss, arising from the information in this brochure, whether in negligence or otherwise.
